2. Citations and explanations (Rule 70.7)

The present invention relates to an ice-hockey or soccer player peg, intended to be moved directly by hand along a track. The invention is characterised in that a button, that keeps the player in the track, is fastened to an eccentric shaft. The eccentric shaft enables a smooth move of the player peg.

The cited DE 1092354 describes a player peg, which is intended to be moved along a track and kept in the track by a button on an eccentric shaft.

This peg is, however, not an ice-hockey or soccer player peg, and the shaft is not intended to make the movement smoother, since the movement is sideways only.

Thus, the invention is novel.

The invention is considered to involve an inventive step.

The invention is industrially applicable.
